Our comments to the questionnaire

Our students mostly possess the need of changes of their behaviour connected with the water exploitation at their homes. The level of their knowledge about the water is quite high but there a lot of issues that should be explained. It comes out form our experiences and talks that our students are trying to save water because of the growing the water prices and the amount of the water bills, not for the nature's sake and the cleanness of the water. We feel the need of that situation. We will try to propagate our knowledge about rational usage of water and the protection of water sources. Our dream is to make our students be aware of the need of water saving and use this knowledge in the practice.

Fresh Water

A speech and powerpoint presentation of our local water resources

Fresh water

As far as the realization of our Comenius project is concerned on June the 6th 2011 the students of the 6th grades took part in the meeting with the workers of our local water resources called 'Hydrokom'. During the meeting they listened to the speech about the water, its sources, resources, ways of saving in everyday life. In addition they saw an interesting powerpoint presentation and at the end they received the cards containing pictures of water. We hope that after that whenever we turn on the taps we will think that water is a precious resource but not an endless one;)
