a)yes =44 b)no=7

6. The water bill at my home is:

a) high=13 b)enough=15 c)small=5 d)I don't know=18

Our comments to the questionnaire

Our students mostly possess the need of changes of their behaviour connected with the water exploitation at their homes. The level of their knowledge about the water is quite high but there a lot of issues that should be explained. It comes out from our experiences and talks that our students are trying to save water because of the growing the water prices and the amount of the water bills, not for the nature's sake and the cleanness of the water. We feel the need of that situation. We will try to propagate our knowledge about rational usage of water and the protection of water sources. Our dream is to make our students be aware of the need of water saving and use this knowledge in the practice
